

Easy Makeup Bag, Wash Bag Perfect For When You Travel

learn-to-sew.co.uk/easy-makeup-bag/

July 15, 2018

This tutorial for a make up bag or wash bag is printable so you can keep it and write all over it as you make changes to suit your project. The size lends itself to other uses, for instance, a lunch bag, it is large enough to take a small flask or bottle and has more than enough space for the food. If your children play football, it is ideal for their boots. As this is a tutorial which uses fabric measured pieces and no pattern, it can be upscaled or downscaled. You can even store your portable camping stove in one of these. Enough jabbering now to the tutorial...

Make Up, Wash Bag

Materials needed:

Main fabric for the outside of the bag: 42cm X 56cm

Waterproof lining fabric – micro light fabrics: 42cm X 56cm

Iron on stabilizer fabric for the main fabric: 42cm X 56cm

Strip of fabric for the handle: 30cm X 6cm

Strip of iron on stabilise for the handle: 30cm X 6cm

1X 42+ cm zip – you can trim a longer zip down.

Pins, scissors, sewing machine, thread.

Getting all your working pieces together.

Fold and Sew Handle

1

2

3

Sew the handle first

Step 1: Iron the stabilizer to the wrong side of the main fabric and to the wrong side of the handle strip.

Step 2: Fold and iron the handle strip in half length ways, open up and press each raw edge to the centre line, iron flat. Fold in half again length ways and iron. You now have a 30cm X1.5cm strip.

Step 3: Top Stitch the handle strip by sewing three rows of stitching as shown in the picture. Set aside for later.

Placing and sewing the zip on the first side

Attaching the zip so no seams show.

Step 4: Lie the lining right side up. Place the zip along the short end with the zipper pull facing upwards.

Step 5: Place the right side downward short end of the main fabric along this same zip making a sandwich of the lining fabric, zip and main fabric. Sew along this end securing the layers together using your sewing machine's zipper foot.

Step 6: Fold the layers back, press down with your fingers, and top stitch along the zip top.

Next you need to

Step 7: Lay the fabric down with the zip in the middle and the lining to one side and the main fabric right side up to the other. With the zipper pull facing down on the main fabric, pint the short side of the lining to the back of the zip.

Step 8: Pick it up and the lining “bag” should fall behind the wrong side of the main fabric. Lay it flat like that and pin the right side of the main fabric to the zip with the zipper pull facing up. Sew this sandwich together using the zipper foot.

Placing and sewing the zip on the second side

The Zipper...

Step 9: You should now have two hanging “bags”, put your hand through the main fabric from the zipper pull end and grab the main fabric layer and the two lining layers and pull them through the main fabric “bag”. You should now have the main fabric “bag” with a lining “bag” inside it.

Step 10: Open the zip, finger press the fabric down and top stitch the fabric as you did with the other side.

Top Stitch and Prepare the layout

10

11

Cutting the Corners

Step 11: Lay your project flat with the zip on the top and equal sections to either side. See picture. Pin securely and finger press as flat as possible making sure that the lining fabric is not bunching or folded inside. Now measure 5cm wide and 4,5cm high in each corner and cut them out.

Step 12: This is where we start putting it all together. Unpin the layers, once again put your hand in the tube and pull the lining through so you have two “bags” once again. Lay it flat just as before when you were cutting the corners. This time line up the layers as following, lining at the bottom, zipper top and then the un zippered main fabric side facing the zippered side. Take care matching the pieces. See picture.

Measure and Cut the Corners

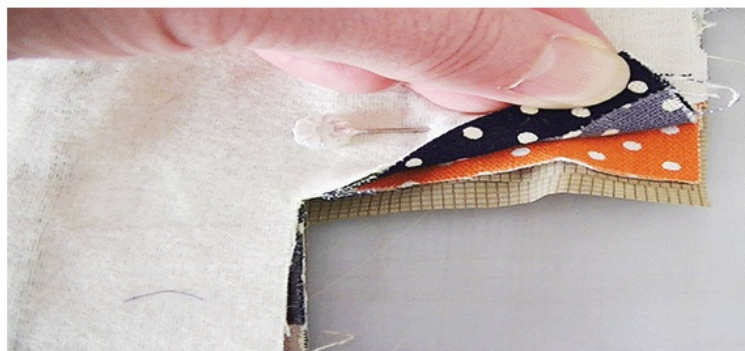

11

12

Turn and lay the fabric flat, lining underneath

Putting It Together

Step 13 A: Make a pull tab for the bottom zip end. Cut a strip of fabric, fold in half, turn edges to the middle and fold in half, sew around the edges to create the tab.

Step 13: Pin the bottom end of the zip side to match shape. Place and pin the tab on the zip with raw edge facing out to the edge. Taking the handle you made earlier place it half way between the zip and the cut end facing into the “bag”. Do this on both sides making a nice handle curve which will be inside the layers. Open the zipper a bit so that it will be on the inside of the sewing line. If it is not you will not be able to open your bag. Pin the end as the bottom.

Step 14: Sew both ends, about 1.5cm from the edge, go slowly and carefully over the zip as this can break your needle. I used stitch length 2.5 and sewed these ends twice as it is going to take the most wear. Snip the zip ends.

Step 15: This is the patience step. Turn the “bag” inside out through one of the holes you cut earlier. Slowly and gently it will come through. :)

Place Handle and Tab

13A

13

Sew and Turn

15

Nearly finished

Step 16: Open and re-align one of the cut corners so the short-end seam aligns with the centre of the side. Make sure all layers are well aligned. This will create a boxed corner. Stitch the raw edges with a 5mm seam. Trim the edges.

Step 17: Turn the bag inside out. Push out the four boxed corners that you have just sewn pin each one. Stitch each boxed corner with a 5mm seam, finishing the french seams and enclosing all raw edges.

Pin and Sew Corners

16

Turn and Sew Inner Seam

17

And It's Done!!

Step 18: Turn right side out and see what a great toilet bag you have made.

Horay!! All Done
